DETAILED ACTION

Allowable Subject Matter

1. Claims 1 – 24 are allowed.
2. The following is an examiner's statement of reasons for allowance:
 - a. The primary reason for the allowance of claims 1 – 24 is the inclusion of the limitations of a cartridge detecting device for detecting a state of a cartridge to be removably installed on a working device having a non-reversibly changing member disposed in the passage, and a projecting member insertable into the cartridge, at a predetermined distance from the passage opening, the non-reversibly changing member being changeable from a first state for a first relationship with the projecting member, to a second state for a second relationship with the projecting member, the non-reversibly changing member being unable to change from the second state back to the first state. It is this limitation found in each of the claims, as it is claimed in the combination, that has not been found, taught, or suggested by the prior art of record which makes these claims allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Art Unit: 2853

a. Shinada et al. (U.S. 6,547,363 B1) discloses a removably installed cartridge, Figure 19, element 8, a non-reversible member (element 8g) disposed in the ink passageway (element 8c), and an projecting member insertable into the cartridge, element 34. Shinada et al. fail to teach the claimed invention of a non-reversibly changing member disposed in the passage, and a projecting member insertable into the cartridge, at a predetermined distance from the passage opening, the non-reversibly changing member being changeable from a first state for a first relationship with the projecting member, to a second state for a second relationship with the projecting member, the non-reversibly changing member being unable to change from the second state back to the first state.
